TMC 7-27

A peek into the future

THE NO. 1 MARINE SCREW COMPRESSOR

They say nothing happens in the compressor world

Well - now something has!

Best-in-class design

Our new TMC 7-27 series has a new, visionary design. With its smooth shape and tilted control panel, this compressor is space-saving and operator-friendly.

Best-in-class footprint and capacity

With a footprint of just 0.7 m², the TMC 7-27 is the smallest in its range in the market.

TMC 7-27 gives as much compressed air as models that have a significantly larger footprint.

Best-in-class temperature control

TMC 7-27 is designed for 55°C ambient temperature.

A unique, patented temperature control system ensures safe operation in the variable conditions in the machine room and with variable load of the compressor.

Best-in-class installation and service access

With a lifting lug and its small footprint, TMC 7-27 is easy to install.

Fewer components give fewer service points, and simple access to all service points has been a priority in the design process.

Best-in-class energy saving

The unique TMC Smart Air[®] technology means 40-50% reduction in the energy consumption compared to a conventional compressor.

With the best regulation range in the market for a compressor this size, the TMC 7-27 is extremely efficient, energy-saving and cost-effective.

**Tamrotor Marine Compressors
is the world's leading
supplier of compressed
air systems for marine
and offshore use**

The product range consists of screw compressors, dryers and filters for any demand of compressed air, including oil-free air. TMC has a world-wide service, spare part and sales network.

The energy-saving, award-winning TMC Smart Air® series of cost-effective marine compressors reduces energy consumption by at least 40% and minimizes energy costs and harmful emissions.
